

# SYMA stand assembly

## Environmentally-friendly turnkey supplier

Meet & succeed!

### Flexibility and innovation

From green booths to international conferences – with more than 40 years of stand assembly experience at large-scale events to draw on, SYMA-System GmbH will always find the ideal solution to match your requirements.

As a stand assembly system developer and proprietor, SYMA is a flexible partner that is always ready to meet even the toughest challenges.

### The green booth

Stand design is a key factor when it comes to green meetings and events. SYMA is on hand to help you plan, configure and set up your booth in line with all the latest eco standards.

Taking “**repair – reuse – recycle – reduce**” as its inspiration, the team is perfectly placed to keep the environmental footprint of every event in check. SYMA-System GmbH is currently in the process of obtaining environmental certification in line with the Austrian Eco-label.

## Individuality and ideas

SYMA works hard to ensure your stand reflects your individuality. Stand assembly experts are available to design and create bespoke booths: from displays, POS solutions and info desks to charging stations and learning centres.

### SYMA services:

- Planning and designing booths and events
- Build-up and breakdown (individual stands, modular setups)
- Rental of standard fixtures and fittings (furnishings, signage systems, info points, pin boards etc.)
- Installation of environmentally-friendly carpets and flooring
- Exhibitor administration (developing a technical check list for exhibitors, managing and costing orders for all exhibitors)

## The SYMA recipe for success:

There are four phases in each managed project:

- **Briefing phase:**  
Following precise definition of your exact requirements, work can begin on tailoring the meeting concept to your needs.
- **Design phase:**  
Your details will be packaged in a suitable concept, and visualised using 3D CAD technology for optimal presentation.
- **Creation phase:**  
The concept that SYMA developed with you is turned into reality, in accordance with your specifications.
- **Evaluation phase:**  
Finally, the finished product is evaluated to assure that it conforms with the requirements set out in the original brief. If required, the SYMA team can also help you to measure the success of your event.
